PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 3.5+ years of experience in cloud infrastructure automation, CI/CD pipeline design, and Kubernetes container orchestration across Azure and AWS. Skilled in Terraform-based Infrastructure as Code (IaC) using reusable modules, for_each loops, and dynamic blocks for scalable multi-environment provisioning. Hands-on experience with Azure networking (VNet, NSG, Load Balancer, NAT Gateway, Application Gateway) and administering AKS clusters. Adept at building observability frameworks with Prometheus and Grafana to sustain 99.9% uptime, backed by strong Linux administration and Bash/Python scripting skills that eliminate manual operational toil.

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure (AKS, Virtual Machines, Resource Groups, App Services, Azure Pipelines), AWS (EC2, S3, EKS - working knowledge)
Azure Networking: Virtual Network (VNet), Network Security Groups (NSG), Load Balancer, NAT Gateway, Application Gateway, VPN Gateway, Peering
Containerization & Orchestration: Docker, Kubernetes (AKS/EKS), Horizontal Pod Autoscaling (HPA), Ingress Controllers
Infrastructure as Code (IaC): Terraform (Modules, for_each, dynamic blocks, remote state, workspaces, variables/outputs), Ansible
CI/CD & Version Control: GitHub Actions, Azure DevOps Pipelines, Git/GitHub, Blue-Green & Canary Deployments, GitOps practices
Automation & Scripting: Python, Bash/Shell Scripting (Basic), PowerShell (Basics)
Observability & Monitoring: Prometheus, Grafana, Azure Monitor, AWS CloudWatch, Custom Alerting & Dashboards
OS, Networking & Security: Linux Administration (Ubuntu, RHEL), TCP/IP, DNS, RBAC, IAM, Security Scanning, Secrets Management

PROFESSIONAL EXPERIENCE

HCL Technologies, Lucknow, India

DevOps Automation Engineer (Senior Analyst)

Oct 2024 – Present

- Architected robust CI/CD pipelines using GitHub Actions and Azure DevOps to automate the microservices lifecycle, reducing deployment lead time by 40%.
- Managed container orchestration on Azure Kubernetes Service (AKS) and AWS EKS; implemented Horizontal Pod Autoscaling (HPA) and Ingress controllers to optimize resource utilization.
- Designed and provisioned Azure network infrastructure including VNets, NSGs, Load Balancers, NAT Gateways, and Application Gateways to secure and route production traffic.
- Built reusable Terraform modules using for_each loops and dynamic blocks for multi-cloud infrastructure provisioning, ensuring environment parity across Dev, Staging, and Production.
- Established an enterprise Observability stack using Prometheus and Grafana; created custom alerting rules and dashboards to monitor cluster health and application latency.
- Led Docker-based containerization strategy with multi-stage builds, optimizing image size and integrating security scanning into the CI/CD pipeline.
- Provided L1 production support and performed Root Cause Analysis (RCA) for infrastructure incidents, maintaining 99.9% uptime for business-critical applications.

Analyst – Infrastructure Support

Feb 2023 – Sept 2024

- Automated repetitive system administration tasks, log rotations, and daily health checks using Bash and Shell scripting, reducing manual operational effort by 25%.
- Monitored and debugged complex application incidents using Linux CLI tools (grep, awk, sed, top) and log analysis to ensure minimal downtime.
- Supported deployment validation and post-release monitoring using Azure Monitor and AWS CloudWatch, ensuring stable production rollouts.
- Implemented automated backup scripts using Shell scripting to ensure data integrity and disaster recovery readiness.

KEY PROJECTS

- End-to-End AKS Orchestration:** Deployed a scalable microservices architecture on Azure Kubernetes Service (AKS) using Helm for package management and Prometheus for monitoring.
- Hybrid Cloud IaC:** Provisioned secure Azure VNets and AWS VPCs from a single modular Terraform codebase using for_each loops and reusable modules.
- Zero-Downtime Deployment:** Configured Blue-Green and Canary deployment strategies in Azure DevOps to ensure high availability during feature releases.

EDUCATION

Bachelor of Computer Applications (BCA) — Lucknow Public College of Professional Studies | 2021

Relevant Coursework: Programming in C & Java, Software Engineering, Cyber Law, Internet Security, Computer Architecture
