PROFESSIONAL SUMMARY

DevOps and SRE engineer with 3.5+ years of experience building CI/CD pipelines, cloud infrastructure, and Kubernetes environments on Azure and AWS. I provision multi-environment infrastructure with Terraform, run workloads on AKS, and use Prometheus and Grafana to spot problems early and keep production at 99.9% uptime. I also handle incidents through to root cause and automate routine work with Python and Bash.

SKILLS SUMMARY

- **Cloud:** Microsoft Azure (AKS, Virtual Machines, App Services, Azure Pipelines), AWS (EC2, S3, EKS)
- **CI/CD:** Azure DevOps Pipelines, GitHub Actions, Git/GitHub, Blue-Green and Canary Deployments, GitOps
- **IaC:** Terraform (modules, for_each, dynamic blocks, remote state, workspaces), Ansible
- **Containers:** Kubernetes (AKS/EKS), Docker (multi-stage builds), Helm, HPA, Ingress Controllers
- **Monitoring:** Prometheus, Grafana, Azure Monitor, AWS CloudWatch, Custom Alerts and Dashboards
- **Scripting:** Python, Bash/Shell, PowerShell (Basics)
- **Networking:** Azure VNet, Load Balancer, NAT Gateway, Application Gateway, VPN Gateway, Peering, TCP/IP, DNS
- **Operations:** Linux (Ubuntu, RHEL), Incident Management, Root Cause Analysis, L1 Production Support

EXPERIENCE

HCL Technologies

Lucknow, India

DevOps Automation Engineer (Senior Analyst)

Oct 2024 - Present

- Built CI/CD pipelines in GitHub Actions and Azure DevOps, cutting deployment lead time by 40% while keeping releases consistent and repeatable.
- Run workloads on Azure Kubernetes Service (AKS) and AWS EKS, using Horizontal Pod Autoscaling and Ingress controllers to handle traffic changes.
- Designed Azure networking (VNets, Load Balancers, NAT Gateways, Application Gateways) to route production traffic reliably.
- Wrote reusable Terraform modules (for_each, dynamic blocks) for multi-cloud provisioning, so Dev, Staging, and Production are built the same way.
- Set up Prometheus and Grafana monitoring with custom alerts and dashboards to track cluster health and application latency and catch issues early.
- Containerized applications with multi-stage Docker builds, producing smaller images and faster pipeline runs.
- Manage pipeline and cluster configuration, including secrets and access policies, across Azure and AWS environments.
- Provide L1 production support and root cause analysis, keeping business-critical applications at 99.9% uptime.

Analyst - Infrastructure Support

Feb 2023 - Sept 2024

- Automated routine admin work, log rotation, and daily health checks with Bash, cutting manual effort by 25%.
- Debugged application incidents using Linux CLI tools (grep, awk, sed, top) and log analysis to limit downtime.
- Validated deployments and monitored releases with Azure Monitor and AWS CloudWatch to keep rollouts stable.
- Wrote automated backup scripts to protect data and support disaster recovery.

PROJECTS

- **End-to-End AKS Orchestration:** Deployed a scalable microservices architecture on AKS using Helm for package management, RBAC for access control, and Prometheus for monitoring.
- **Hybrid Cloud IaC:** Provisioned Azure VNets and AWS VPCs from one modular Terraform codebase using for_each loops and reusable modules.

- **Zero-Downtime Deployment:** Set up Blue-Green and Canary deployments in Azure DevOps to keep the application available during releases.

CERTIFICATIONS

- Six Sigma (Skillsoft): Voice of the Customer; Black Belt - Determining Requirements from VOC; Black Belt - Leadership and Change Management
- AI: OpenAI Foundational Knowledge; Claude 101, Claude Code 101, Claude Platform 101 (Anthropic)

EDUCATION

Lucknow Public College of Professional Studies
Bachelor of Computer Applications (BCA)
Relevant Courses: *Programming in C & Java, Software Engineering, Internet Security, Computer Architecture*

Lucknow, India
2021
